D I S T R I B U T E D E T H N O G R A P H Y

- Enables the collection of stories and experiences from real people, when they matter the most;
- Allows us to uniquely combine storytelling with statistics and data visualisation;
- Birds eye view of the high level patterns, with added descriptive story data to explain contextual insight;
- Democratising the research process: communities have the generative power to define and justify what it needs to change.

To begin, imagine someone has told you they have just been started on steroid treatment. Thinking about your experience, is there one incident or event that happened that you could share with them that they might find helpful?

Please share only one example for now; if you'd like to share more than one, you will have an opportunity to do so at the end.

You can share as much or as little as you like (around a maximum of 250 words), and your story can be positive, negative, neutral or a combination of these. What matters is that you share what is important to you.

1.1 Please share your story here:

Type your story....

1.2 If you were to describe this story in a few key words or give it a title, what would they be?

Share your title...

Thinking about your experience as a healthcare professional, could you share with us one event or anecdote about a particular case that we might find helpful in considering how in our clinical service we might better support our patients who take steroids?

Please share only one example for now; if you'd like to share more than one, you will have an opportunity to do so at the end.

You can share as much or as little as you like (around a maximum of 250 words), and your story can be positive, negative, neutral or a combination of these. What matters is that you share something you consider important.

1.1 Please share your story here:

1.1

Take a moment to reflect on your last week in nursing. What experience did you have that you feel matters now and needs to be shared? Please use the space below to describe that experience.

Please don't mention any places, services or individual names.

1.2

If you were to give your story a title or a headline, what would it be?

1.1 Think about young people getting married in your area. Can you share a story about what it's like for a young person in your community to be married? When we say young person, we mean a person who is 10-20 years old. The story can either be from your own experience or one that you know about.

OR Can you tell me a story about what it's like for young people to grow up here in your community?

(For enumerators: Once the participant is ready to share their story, hit record button. After the participant shares story, take a few moments, to write some notes or key words from participant's story in the box below)

default text

Start by taking a look at the case study below.

Case Study: Case Study: An 88 year old female patient has presented to DGH after having had a fall at home. She has no fracture but is experiencing decreased mobility and confusion. The patient lives at home alone, and has had a recent admission for a similar issue. She does not have formal services currently and her family are resistant to her being discharged.

Given the constraints you face on a daily basis in your role, please use the open text spaces below to describe what would actually happen in this situation at some key moments. If you are not usually present at any of these points, let us know what you would do if you were.

1.1 With discharge in mind, what would you do when this person first presents?

CCXCX

1

1.2 How would you manage the assessments during this admission?

XCXCX

1

1.3 How would you prepare this person for discharge?

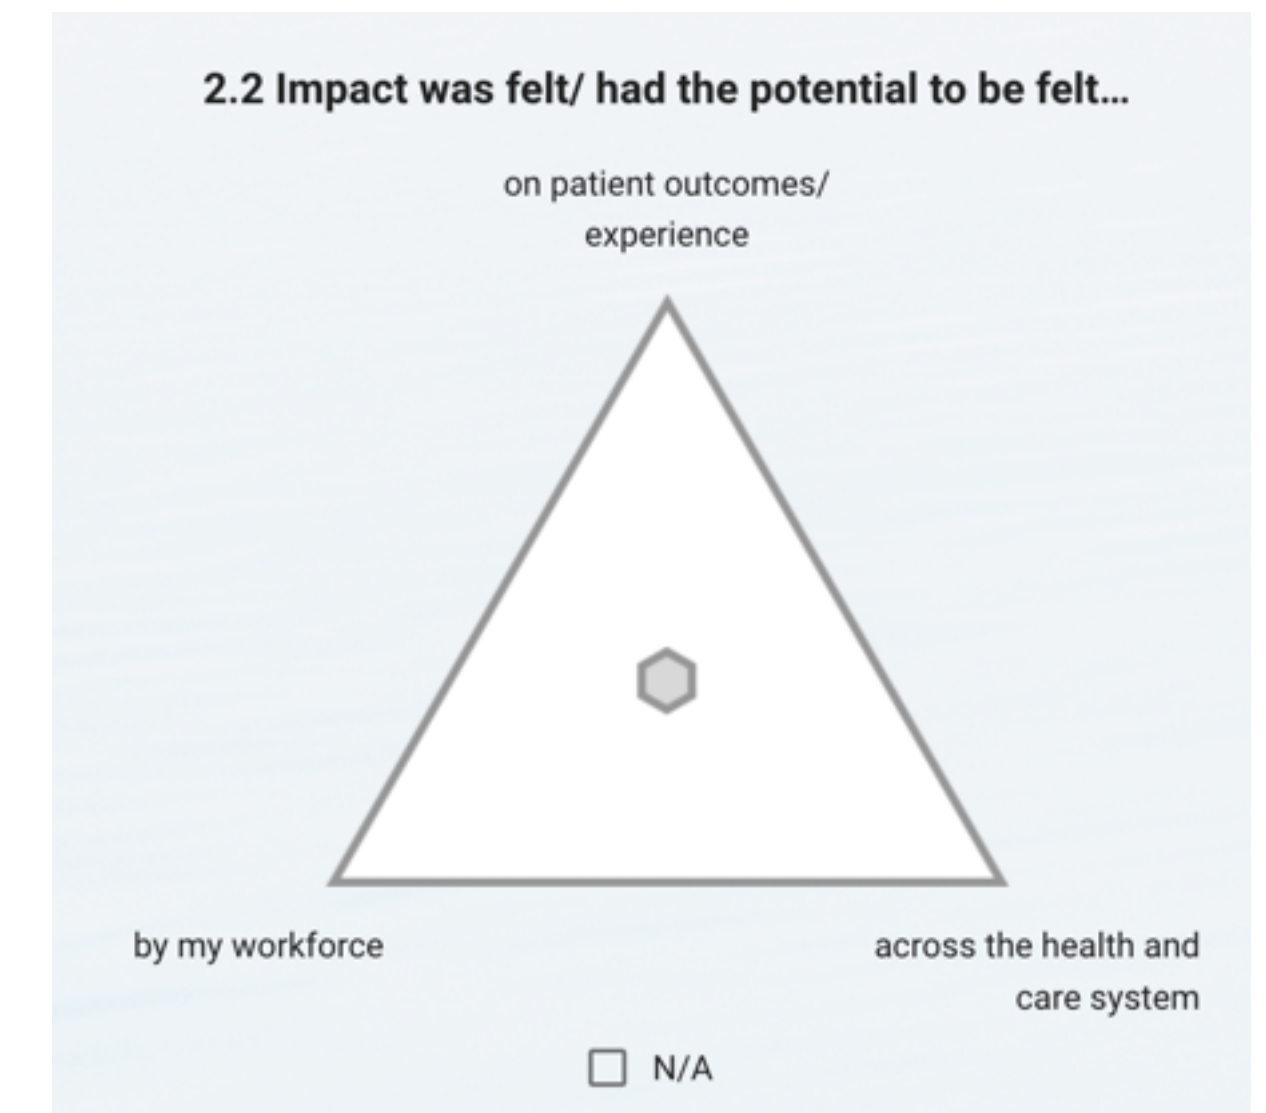

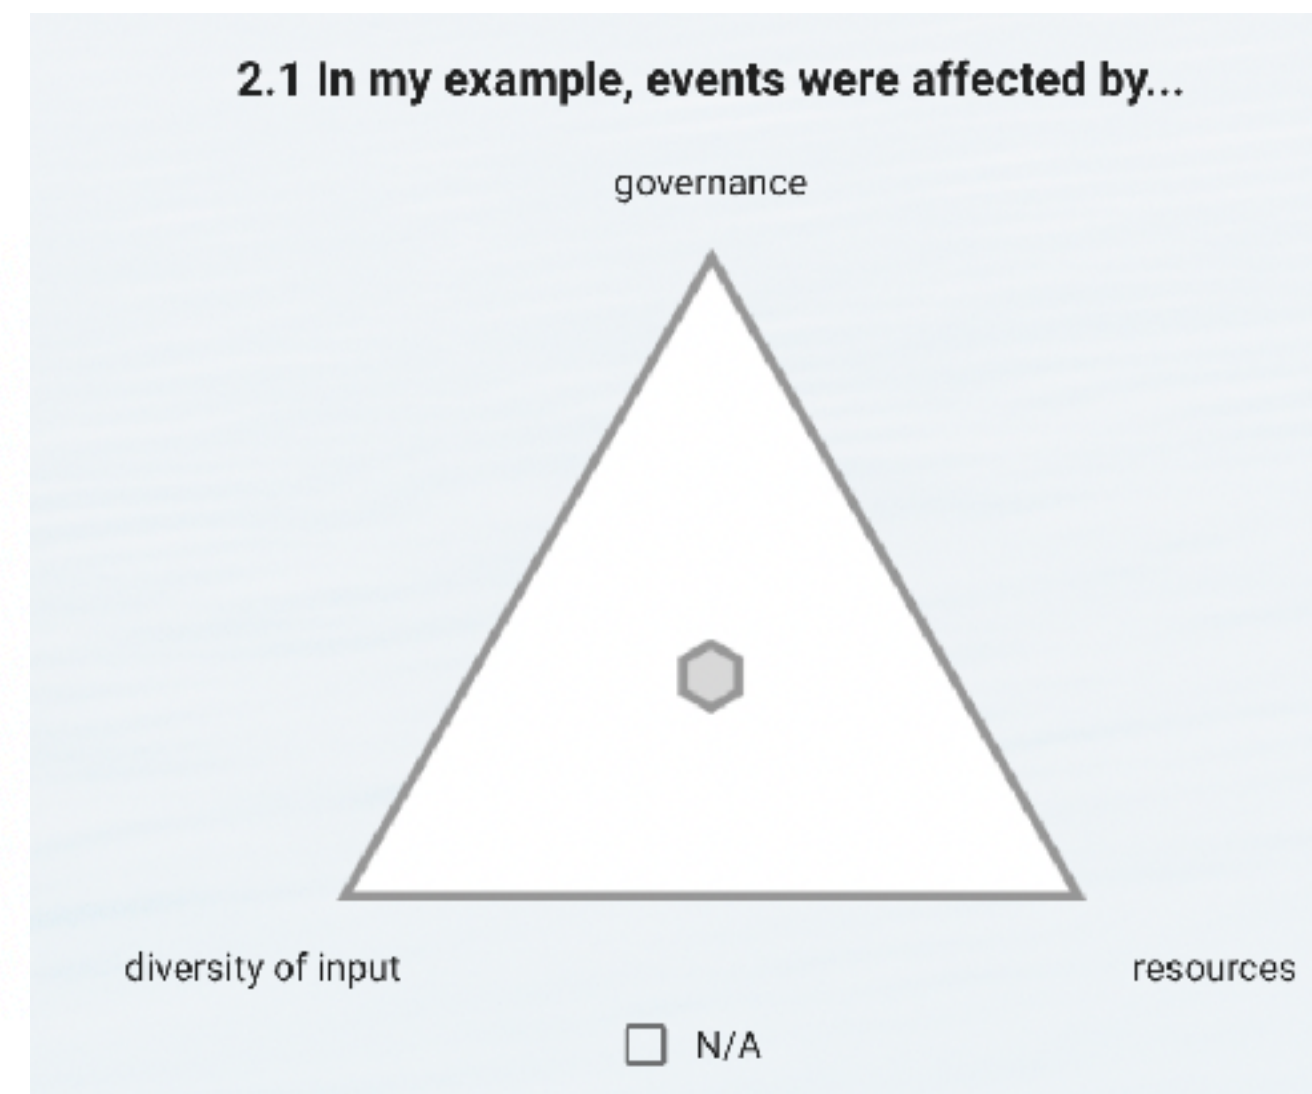

XCXCX
